

Dialog Cloud

The flexible and secure alternative to operating on your own servers

The amount of data in administrations is constantly increasing, and with it the requirements for its management. Dialog Cloud, exclusively for public administrations, offers stable operation of your IT infrastructure and highly secure cloud solutions. This provides you with a central contact person for software and hardware.

Work independently of time and location: the advantages of Dialog Cloud

- Single point of contact: Dialog is your central contact for both software and hardware.
- Highest possible level of security: in a tier 3 data center in Switzerland.
- Secure remote access to Dialog Cloud enables staff to work independently of time and location.
- Attractive rental model and high level of flexibility: you don't need to set up a separate room on-site that has to be air conditioned and maintained. Since the IT infrastructure is rented, there is no need for large investment in acquisition.

“ The performance when working in Dialog Cloud and the fact that we receive practically everything from a single source are worth their weight in gold for us. ”

Barbara Gerber, Communal Chancellor, Wiler b. Utzenstorf
